Mobile engineer with 7+ years of experience building fintech, social, and e-commerce apps in Kotlin, Jetpack Compose, Flutter, and Kotlin Multiplatform. At NymCard, built features for a digital payments app (card issuance, virtual and physical cards, multi-currency wallets, real-time transactions), cut duplicated code by ~35% with KMM, and built Claude API-powered developer agents for feature scaffolding, ViewModel generation, and security checks. Shipped Yibber and Goobr's AR features. Mentors engineers and enforces test coverage in CI. Open to remote and relocation.

7+	~35%	70%+	Claude API
years in mobile engineering	less duplicated code via KMM	test coverage on core modules	developer agents for scaffolding and security

Areas of Expertise

Kotlin — Jetpack Compose — Kotlin Multiplatform — Flutter — Clean Architecture
Fintech & Payments — Claude API & AI Agents — CI/CD — Mobile Security — Mentoring

Work Experience

Android Engineer

NymCard | Karachi, Pakistan | April 2025 - April 2026

- Cut duplicated code by ~35% across Android and iOS by adopting Kotlin Multiplatform for shared business logic and publishing a reusable internal library to JFrog Artifactory, so core components are reused across multiple projects.
- Accelerated team development by building Claude API-powered developer agents inside the Android project for feature scaffolding, ViewModel generation, UI component creation, and security checks.
- Raised quality and security on a digital payments app (card issuance, virtual and physical cards, multi-currency wallets) by enforcing Kover coverage standards in CI and implementing certificate pinning, biometric authentication, and encrypted storage; mentored junior and mid-level engineers through code reviews and pair programming.

Senior Software Engineer

Avanza Solutions | Karachi, Pakistan | January 2023 - April 2025

- Simplified async code across the codebase by standardizing on Kotlin Coroutines and Flow in place of RxJava2, giving the team one consistent threading pattern.
- Protected sensitive financial data in financial applications by implementing certificate pinning and encrypted storage and building the data layer on Room, SQLite, and DataStore, supporting regulatory compliance.
- Delivered responsive, cohesive features by working with UX/UI designers and backend engineers to align interfaces with backend services.

Software Engineer

Cubix Inc. | Karachi, Pakistan | October 2021 - January 2023

- Delivered real-time audio features for Yibber, including trimming, sound-effect merging, and live podcast streaming, by building on ExoPlayer and Android AudioRecord APIs.
- Built the AR filter pipeline for Goobr's pet social features using ARCore and custom shader rendering.
- Extended the team's stack to Flutter by building cross-platform shopping and marketplace modules in Dart with BLoC, Provider, and Riverpod on a layered architecture.

Associate Software Engineer

Cubix Inc. | Karachi, Pakistan | July 2019 – October 2021

- Sped up integrations across projects by designing reusable wrappers for REST APIs, Firebase (Firestore, Crashlytics, FCM), Google Maps SDK, and social login (Google, Facebook, Apple).
- Improved maintainability and testability by applying Clean Architecture (MVVM, MVP) with Hilt or Koin, Room, DataStore, and Realm across multiple projects.
- Reached 70%+ code coverage on core business-logic modules by writing unit and integration tests with JUnit and MockK.

Technical Skills

Languages	Kotlin, Java, Dart
Android	Jetpack Compose, Android SDK, Jetpack libraries (ViewModel, LiveData, Navigation, WorkManager), Kotlin Multiplatform (KMM)
Flutter	Flutter, Dart, BLoC, Riverpod, Provider, platform channels
Architecture	Clean Architecture, MVVM, MVP, Repository pattern, modular architecture
Async	Kotlin Coroutines, Flow, RxJava2
Dependency Injection	Hilt, Dagger, Koin
Storage	Room, SQLite, DataStore, Realm, Firebase Firestore
Networking	Retrofit, OkHttp, REST APIs, GraphQL (basics)
Security	SSL/certificate pinning, AES-256 encryption, biometric authentication, PCI-DSS
AI	Claude API (Anthropic), LLM integration, agentic workflows, AI developer agents
CI/CD & Tools	Git, GitHub Actions, Gradle, Kover, JFrog Artifactory, Firebase App Distribution, Play Store publishing
Testing	JUnit, MockK, Espresso, unit and integration testing

Notable Projects

Project	What it does	Tech
CasaMart	Cross-platform shopping app with product browsing, cart, checkout, and order tracking	Flutter, Dart, BLoC, Riverpod, Provider
Yibber	Voice-first social platform with audio bios, live and pre-recorded podcasts, sound-effect merging, and audio trimming	ExoPlayer, AudioRecord, Firebase
Goobr (Play Store)	AR-powered social app for pet owners with filters, animated stickers, music posts, and guest roaming	ARCore, KMM shared logic layer
Curious (Play Store)	Anonymity-first social app with end-to-end encrypted chat, deep linking, in-app geolocation, freemium monetization, and social SSO	Firebase Auth, Google Maps SDK
Clean Spots (Play Store)	Location-based spot finder with user-generated content (add, remove, report) and offline caching	Google Maps SDK, Room

Education

BS, Computer Science

Iqra University | Karachi, Pakistan | April 2015 – June 2019
